

The pneumatic Bead-Breaker Presser

The **SP3000 Bead Breaker - Presser** is a new and ULTRA rigid right help, designed to work primarily on ULTRA hard and very demanding technologies, on “SST” Run flat technologies (Self Supporting Tyre) and on the “SR – Support Ring” System.

The bead breaking is executed by the progressive penetration of the disc on the tyre bead, when this is turning, without any contact with the rim.

The **SP3000** accessory is also a great help for demounting the second bead since it has an arm for disc lifting and upper bead mounting.

Main characteristics:

- Guarantees greater rigidity thanks to the vertical “double guide”
- Guarantees efficient bead breaking for all types of tyres, thanks to a great operating force and the patented controlled penetration system
- Possibility of use with the Kit Pax or the Kit SR System, without losing use of the bead lifting disc arm.
- New command console with tool holder

TECHNICAL DATA

Power supply	pneumatic
Press force on tools	7700 N
Operating pressure	10 bar
Weight	115 kg
